Office Action Summary

Art Unit: 2811

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-70, drawn to semiconductor circuits, classified in class 377, subclass 60.
- II. Claims 71-114, drawn to processes for making semiconductor devices, classified in class 437, subclass 225.

The inventions are distinct, each from the other because:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case unpatentability of the group I invention would not necessarily imply unpatentability of the group II invention, since the device of the group I invention could be made by processes materially different than those/that of the group II invention, for example, the processes do not make the systems of claims 66-70. Also the "photosensitive" area (claims 1, 14, 53) or "charge collection" area (claims 28, 39) could be formed by etch and epitaxial refill rather than formed in a substrate. Also a "conductive layer" could be formed before rather than after a "photo-collection" region.

Because these inventions are distinct for the reasons given above and, as shown by the above different classifications, the fields of search are not co-extensive and separate examination would be required, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 2811

Furthermore, if applicant elects the group I invention, then applicant also must elect a species. This application contains claims directed to the following patentably distinct species of the claimed group I invention: (A) claim 66; (B) claim 67; (C) claim 68; (D) claim 69; (E) claim 70.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 53 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
